

JULY 14.

Mr. GEO. Y. SHOEMAKER in the chair.

Thirteen persons present.

*On large Crystals of Stibnite.*—Dr. A. E. FOOTE exhibited a specimen of stibnite which was shown by the Commissioners of the Japanese Empire at the World's Exposition, New Orleans, and pronounced by them to be the finest ever found. It is a large fan-like group, twenty-two inches high by nine inches wide. The crystals vary in diameter from one to two inches. The largest is perfectly terminated. The Japanese locality, which has hitherto been incorrectly given, is Iyo. On account of their remarkable brilliancy, extraordinary size, and great number of crystalline planes, it is the most remarkable metallic mineral ever found. The known planes of stibnite are now eighty-five, of which forty, described by E. S. Dana from this locality, are new.
